

If you are interested in purchasing hosting for your bot, this is something I offer. Please have a look at the following link for further information: www.fiverr.com/mdaniels6758/host-your-discord-bot

Steps

1. Install Nodejs & NPM.
 - a. Windows - <https://nodejs.org/en/download/current/>
 - b. Ubuntu –
 - i. `curl -fsSL https://deb.nodesource.com/setup_current.x | sudo -E bash -`
 - ii. `sudo apt-get install -y nodejs`
 - iii. `sudo apt install npm`
2. Download the bot from the Fiverr delivery and unzip.
 - a. Windows – right click and unzip.
 - b. Ubuntu – unzip on windows and drag and drop using FileZilla.
3. Go to the unzipped bot's folder. Open powershell.
 - a. Windows - You can do this by opening the bots folder in file explorer, holding shift + right click on the white area and clicking open powershell here.
 - b. Ubuntu – Ignore this step.
4. Enter **npm install** into the powershell window.
5. Edit the config.json file.
 - a. Edit the file as appropriate. Prompts are included for each section.
 - b. You may need [notepad++](#) to do this.
6. Enter **node index.js** into the powershell window.
7. Your bot is now working!

To get the ID of a channel, server, role or user, simply right click on it and hit copy ID. **If you cannot see this**, click settings in the bottom left, navigate to advanced and toggle developer mode.

Getting your bots token & adding it to your server - <https://discordpy.readthedocs.io/en/latest/discord.html>

Further updates: If you are interested in making further editions/edits to the bot, please feel free to contact me!
